DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed 14 October 2004 has been considered for this Office Action.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by

International Patent Application WO 98/02331 (WO '331).

A fastener (10, 70) comprises a strip-shaped base (12) having a major surface and a back surface opposite to the major surface (Figs. 1 and 16a). An engaging section (18) is provided on the major surface of the base (Figs. 1 and 16a). An embedding section (38,74) is provided on the back surface of the base. The fastener is installed integrally to an article through the embedding section (Figs. 10 and 12). The embedding section comprises a plurality of projecting elements (38,74) discretely arranged so as to be spaced apart from each other in a longitudinal direction of the base (Figs. 1 and 16a). Each projecting element extends outward from the base substantially in a width direction of the base (Figs. 1 and 16a).

Each of the projecting elements is formed integrally with the base (Figs. 1 and 16a).

Each of the projecting elements is provided detachably on the base (Figs. 1 and 16a).

The plurality of projecting elements is arranged at regular intervals in the longitudinal direction of the base (Figs. 1 and 16a). The projecting elements project symmetrically on both lateral sides of the base (Figs. 1 and 16a).

Each of the projecting elements has a generally flat outer surface extending parallel to the back surface on a side away from the back surface of the base (Figs. 16a).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hall (US 4,531,733), Billarant (US 4,617,214 and US 5,422,156), Ohno et al. (US 5,688,576), Fuzzell (US 6,216,315 B1), Murasaki (US 2002/0023322 A1), Billarant et al. (US 6,596,371 B1) and Fagan et al. (US 6,763,556 B2) are cited to show state of the art with respect to fastener having a base with engaging elements in one side and embedding elements in the opposite side.
